

Case Erecting

QUICKLY ERECT. QUICKLY PACK.

Whether used to support logistics processes or as the first station in a fully automated packaging line, fully automatic folding box erectors enhance any packaging process. They quickly and reliably unfold cartons of various designs, seal the bottom, and make them ready for use.

Different sealing methods can be used to meet any requirement.

Fully automatic and high-performance: the folding box erector adapts precisely to individual requirements. It also sets standards in terms of flexibility.

Size

XS up to XXL

Closure

Self-adhesive or wet adhesive tape, hot glue

Magazines

Automatic erectors are equipped with up to 4 magazines

Quick Facts

FOLDING BOX ERECTORS

Advantages at a glance

Minimum staffing requirements

Reduction in personnel costs

Quick preparation of boxes

Increased throughput –
Increased efficiency

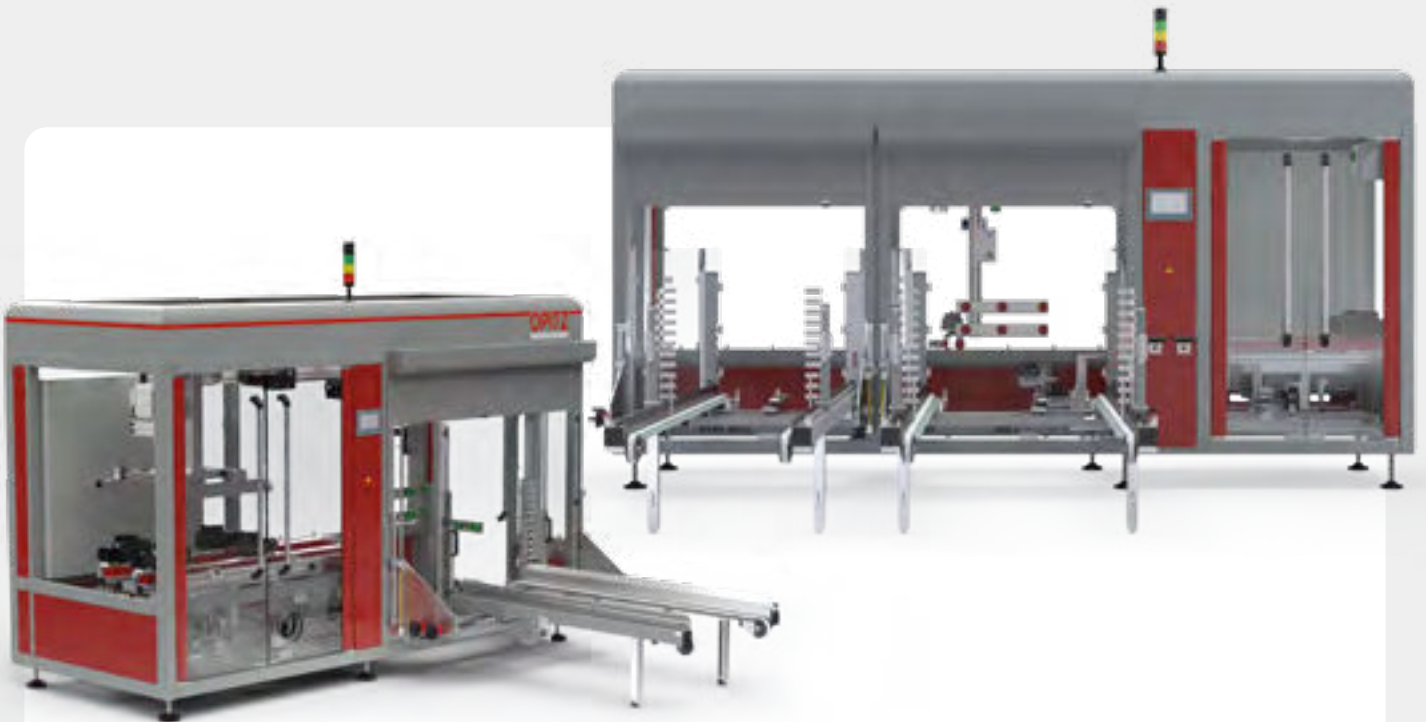

Reduction of injury risks

Case Erecting

QUICKLY ERECT. QUICKLY PACK.

Fully automatic & flexible

1-fold and 4-fold erectors – a comparison

Our folding box erectors offer maximum flexibility when setting up your shipping cartons, because we place great importance on supporting a wide range of formats. This allows users to convert the machine to a different carton format within 2–3 minutes without having to accept long downtimes.

In addition, our erectors are available with up to four magazines. The magazines store the respective carton formats to be processed,

which means that with up to four magazines, four different carton sizes can be processed in parallel on one system – from XS to XXL. This eliminates changeover times for carton format changes.

The systems can be integrated into any warehouse management system via appropriate interfaces, so that no manual work is required during erection.
